

## COMMUNITY EDUCATION

### **KITUG** (Kauai IT Users Group)

DSI facilitates the Kauai IT Users Group, where computer users of all levels can learn from each other. Presentations and Q&A sessions are provided. Please call 245-1695 or email [itgroup@okauai.com](mailto:itgroup@okauai.com) for more information.

### **Windows 7**

The Windows Vista product cycle is almost over, and Windows 7 appears to be a vast improvement in performance and usability. Contact us for information about migrating to Windows 7.

### **Linux**

You may be using or have heard about Red Hat or Ubuntu Linux. Please contact us if you are interested in a Kauai Linux User Group.

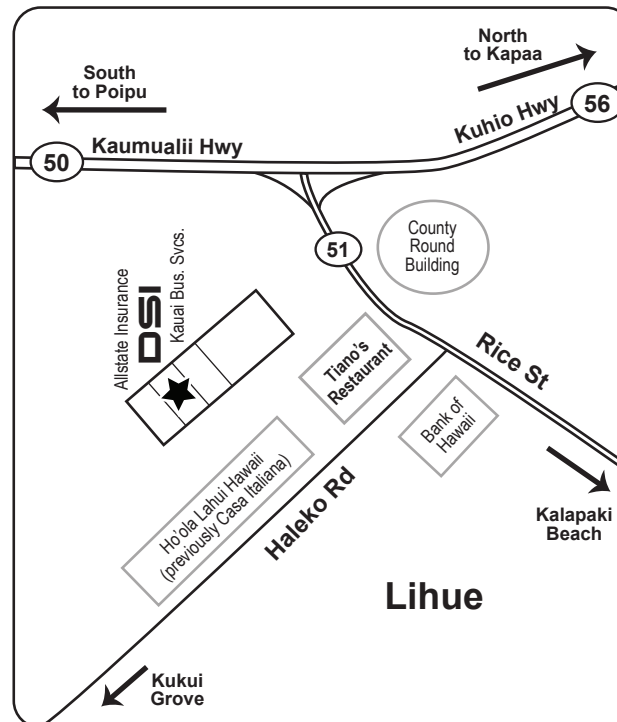

## HOW TO FIND US

Please call us for an assessment of your needs at 808-245-1695, or feel free to visit our office in downtown Lihue, across from the Round Building, behind what used to be Tiano's Restaurant.

See our website for more details:  
[www.dsi.gs](http://www.dsi.gs), or email us at [i@dsi.gs](mailto:i@dsi.gs).

- Cross Platform Solutions - Mac/Windows/Linux

### Creating a Web Presence

- Domain Name Registrations
- Web Site Development
- Web Site and Email Hosting

### Print Design and Graphics

- Logo & Print Design
- Location Photography

### One on One Tutoring

For a variety of operating systems including Macintosh, Windows, and Linux; and a variety of applications including Photoshop, Excel and web applications

### Promoting Your Business Online

- Online Research
- Search Engine Promotions
- Mass Email Campaigns

---

## WHAT DO WE DO?

---

Basically, we design, build and maintain structures in "dataspace" or "cyberspace", that being the world within computers and networks. A structure might be a web page, file sharing network, database interface, or something completely different.

---

## COMPUTERS & NETWORKS

---

At DSI we are also able to design, build and maintain computers, networks and operating systems. We work with Windows, Macintosh and Linux systems and are able to use each according to their individual attributes and advantages. We offer custom fabrication of computers to our clients for use as servers or specialized workstations. We can also utilize the latest energy saving technologies to build low energy computer systems.

Our staff are experts at designing and installing home or office networks that meet our clients' personalized desires for a productive and user friendly environment. Someone starting up a new office might hire us to specify and install the hardware and software needed to implement network cabling, servers, printers, internet connectivity and individual workstations, in such a way as to optimize staff productivity and comfort.

With an eye towards what we believe is the future of information technology, we utilize, promote and support open source and cloud computing solutions. We welcome any discussion about these concepts and how they may apply to your individual circumstances.

---

## EXPERT INTERVENTIONS

---

DSI has been doing business on Kauai since 1992. Our staff are expert in database management and creation, server administration, web application design and hosting, and graphic design, as well as computer hardware and software installations, modifications and maintenance.

We have years of experience with servicing computer issues at homes, businesses, and schools. Our troubleshooting skills are well up to date and ever expanding, as we learn something new each day.

In summary, we help people keep their information accessible, organized, and secure.

---

## MANAGING INFORMATION WITH DATABASES

---

An example of a database interface might be a shared contacts database that is hosted on the internet, enabling multiple people in multiple locations to add, edit or update individual records, as well as print address labels or dump out email lists.

This interface may be hosted with multiple privileges, enabling some users to change records, and some users to only read records.

This is only a basic example - DSI routinely works on more specialized projects. Please contact us to discuss your needs.
